SUMMARY

Since 2021 I live in Poland. Now I get a new profession Python Developer. In April 2024 I finished training course "Python Developer in international school "Mathshab". I learned Python, API, SQL, Django, MongoDB, ETL, ELT, AirFlow. I like this because I've always been interested in programming, and the syntax of Python is compared to the syntax of English. Thanks to this, Python code is easy to read and write, so it is easy to learn. With Python and Django, Django Rest I can solve various problems and create new applications and websites. For me it's very exiting. I plane develop in the field of backend developing and continue studying.

PROJECTS

EasyFannyBot

🔗 <https://github.com/Umita1987/EasyFannyBot>

Simply two-button telegram bot, which, when user click button(Joke or Meme), sends to user random joke or meme.

- Developed a Python web scraping tool, processing over {100} jokes and memes, ensuring no repetitions for user preferences
- In this project I used library telebot, library BeautifulSoup, library requests

RandomQuotes_bot

🔗 https://github.com/Umita1987/RandomQuotes_bot

This telegram bot sends random quotes from films and statements of famous people in a selected quantity.

- Successfully delivered personalized quote service to users by integrating API for random quotes based on 50 unique preferences
- This is asynchronous telegram bot. It can works with different requests at the same time
- In this project I used python libraries asyncio, aiogram to write code with the async/await syntax
- Also in this project I worked with API(Random Famous Quotes API)

SKILLS

Programming

[Python3](#) [NumPy](#) [Pandas](#)

Web Development

[HTML](#) [Django](#) [CSS](#) [Django Rest](#) [FastApi](#) [AirFlow](#)

Databases & Servers
